

HIGHLAND DNC, INC.

CLASSIC DNC SOLUTIONS

editNC

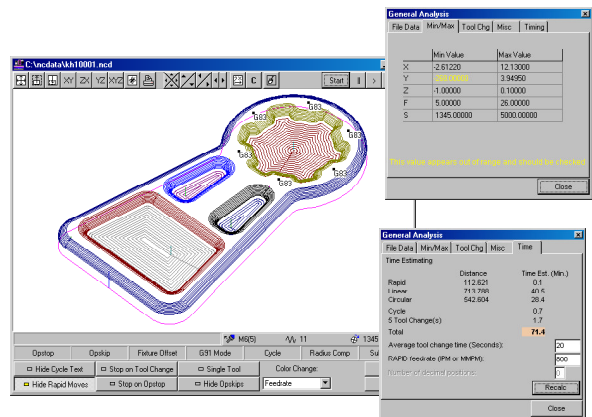

editNC is simple to use, inexpensive to acquire and maintain, and flexible enough to meet almost every CNC

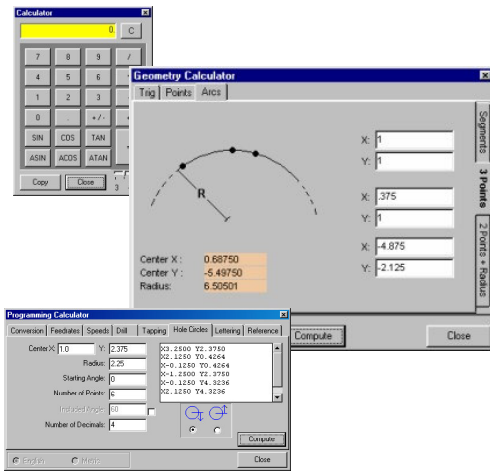

View Only – allows program review and audit with protection against change.

Edit – Functions to add, remove, or replace sequence numbers; reformat, scale, and transform coordinates; automatic selection of all blocks within a tool; basic lettering, smart Search; context-based help; user selectable fonts and colors.

Compare Files – Files can be compared using an automatic or a manual compare operation.

Analyze, Estimate and Backplot – During a General Analysis the CNC program is scanned and the results displayed on five tabbed pages of a dialog box. These immediately identify min/max ranges, CNC time estimates and file data size.

Screen showing analysis output of a 90 megabyte file, the equivalent of nearly 150 'miles' of punched tape

Calculate – Three calculators – programming, geometry and basic – are provided. The programming calculator provides major functions relating to feeds and speeds, drilling, tapping and lettering and displays user modifiable reference data. All calculators work with metric or English units.

Performance – From its inception in 1993, **editNC** has been continually improved, refined and enhanced to maintain its leadership among Windows-based CNC program editors. Customer-focused design and programming have resulted in a product that far exceeds the performance of editors costing over twice as much¹ while providing more function.

Output – Several printing options, including color and black and white highlighting.

1. Based on numerous tests. Examples are the time to open and resequence a 4 megabyte file, where **editNC** performed 23 times faster than a \$500 editor; and time to add a value to all X-coordinates in the same file where **editNC** performed 37 times faster. (37 seconds vs. over 12 minutes in a typical test. **editNC**
